Unless otherwise noted, upon receipt the condition of the sample was acceptable for analysis.

Customer provided data such as volumes, areas, etc., cannot be verified by QuanTEM Laboratories, LLC.

(2)Also includes spores from Curvularia, Exosporium, Exserohilum and Helminthosporium. (3)Includes spores from Helicomycetes, Helicoma, Helicomina, and Helicodendron.

Results are preliminary pending quality control review. Clients will be notified immediately if a report revision is necessary. The result(s) for Cladosporium in sample 1 and Aspergillus/Penicillium in sample 2 are based on a trace analysis. The result is an estimation and not a total count. The analytical sensitivity is equal to one fungal spore, structure, pollen, etc. Percent coverage = amount of particulate matter. With 25-50% coverage, results may be underestimated; with 50-70% coverage, results will be underestimated; with >70% coverage, slides are designated overloaded (too dirty to count). The results taken from your home, building, etc. cannot be interpreted without physical inspection of the contaminated area or without considering the building's characteristics and the factors that led to the present condition. Interpretation of results is the responsibility of the company or individual who conducted the investigation.

This report shall not be reproduced except in full, without the written approval of the laboratory.

This report may not be used to claim endorsement by AIHA LAP, LLC. or any agency of the U.S. Government.
